

Automatic wiping method for pigtail end face

AI Overview

Automatic fiber end face cleaning boxes provide fast, efficient, and safe cleaning of pigtail connectors without manual scrubbing. Overview Automatic or semi-automatic fiber end face cleaning tools are designed to clean the end faces of fiber optic pigtails, removing dust, oil, and other contaminants while preventing scratches or damage. These tools are particularly useful in FTTH, data centers, and field installations, where maintaining optimal signal performance is critical. How It Works Cleaning Mechanism: The tools use a replaceable cleaning tape or fine fibers that wipe the connector end face when the pigtail is inserted into the device. This ensures consistent pressure and coverage, which is difficult to achieve manually. One-Button Operation: Many models feature a single-button activation, allowing the user to clean SC, LC, FC, ST, SMA, DIN, and other connector types quickly and efficiently. Replaceable Cartridges: Cleaning cartridges can often be used over 500 times, reducing long-term costs and environmental impact. Advantages Efficiency: Cleans connectors in seconds without manual wiping. Safety: Minimizes the risk of scratches or contamination that can degrade optical performance. Versatility: Compatible with multiple connector types and sizes (1.25mm and 2.5mm ferrules). Cost-Effective: Replaceable cartridges and long usage cycles lower operational costs. Usage Tips Ensure the connector is properly aligned with the cleaning slot. Press the activation button or insert the pigtail according to the tool's instructions. Replace the cleaning tape or cartridge when the cleaning efficiency decreases. Store the tool in a clean, dry environment to maintain performance. Popular Tools CLE-Box Fiber End Face Cleaning Box: Suitable for SC, ST, FC, SMA, DIN, and Diamond connectors, with replaceable cleaning tape. AUA-550 Fiber End Face Cleaner: Designed for single-mo...
