

Bahamas Fiber Optic Cable Construction

AI Overview

The Bahamas is actively expanding and reinforcing its fiber optic infrastructure through subsea cables and FTTx networks to improve connectivity and network resilience.

Key Projects and Developments

Subsea Cable Enhancements: Cable Bahamas has recently deployed a new subsea fiber optic cable connecting Norman's Cay to Cape Eleuthera. This project strengthens the existing network, which previously relied on a single cable from Bannerman Town to North Eleuthera. The new cable provides a resilient network path, ensuring service continuity in case of damage to the original line. Procurement of the fiber began in late 2023 and concluded in October 2024, with careful planning to manage costs and logistics, including sourcing surplus fiber from Baltimore.

FTTx Network Construction: Actavo, a contractor with extensive experience in the Caribbean, is building a state-of-the-art fiber-to-the-x (FTTx) network for Cable Bahamas Limited. This network delivers high-speed broadband, TV, and fixed-line services across the islands. The project emphasizes safety and quality, adhering to ISO 45001, ISO 9001, and ISO 14001 standards, and includes bespoke safety plans and standard operating procedures.

Local Fiber Optic Service Providers

Several companies in the Bahamas specialize in fiber optic construction and maintenance:

- Lightcommunication Company** offers installation, splicing, OTDR fault locating, and routine maintenance for both internal and external fiber networks, supporting businesses and industries with reliable connectivity.
- Clear Fiber Technology Solutions** provides consulting, network upgrades, and new fiber deployments, focusing on innovative solutions for commercial and residential clients.
- IslandWide Cabling & Consulting** assists with building, upgrading, and expanding IT infrastructure, offering cost-effective and dependable fiber solutions.

Goals and Benefits

The primary objectives of these projects are:

- Network Resilience:** Reducing vulnerability to outages by creating redundant paths.
