

CWDM Dense Wavelength Division Multiplexing

Overview

Normal WDM (sometimes called BWDM) uses the two normal wavelengths 1310 and 1550 nm on one fiber. Dense WDM (DWDM) uses the C-Band (1530 nm-1565 nm) transmission window but with denser. In fiber-optic communications, wavelength-division multiplexing (WDM) is a technology which multiplexes a number of optical carrier signals onto a single optical fiber by using different wavelengths (i. Although both technologies function by. By comparing CWDM vs DWDM vs MWDM vs LWDM vs SWDM, you can make an informed decision to ensure your network meets your data capacity, distance, and application requirements. FS DWDM transceivers are available with C17-C61 100 GHz DWDM wavelengths, and C17-C61 50 GHz DWDM wavelengths, including DWDM SFP, DWDM SFP+, DWDM XFP, and Tunable DWDM transceivers that support transmission distance up to 100 km.
