

Ceramic ferrule ratio

Overview

Ceramic ferrules feature low insertion loss for optical transmission, an excellent strength-to-elasticity coefficient ratio and are resistant to changeable environments – qualities which make ceramic the preferred material for connecting Fiber Connectors and Patchcord. They are made of zirconia ceramic, which offers the highest performance and durability of all ferrule material types. All Standard Ferrules are precision manufactured according to strict quality standards. Our Custom Ferrules are designed to meet unique requirements for a wide range of. Ceramic ferrules and sleeves are often used in optical connectors, attenuators, fiber stubs, and other optoelectronics requiring low signal loss. Rosen offer various shapes of ceramic ferrules.
