

Distribution Box Inspection Light

AI Overview

Distribution box inspection lights or windows provide visual indication of operational status and allow safe monitoring of electrical systems without opening the enclosure.

Types of Inspection Lights and Windows

Indicator Lamps: LED panel indicator lights are commonly used in distribution boxes to signal operational status, faults, or alarms. They are energy-efficient, long-lasting (up to 50,000 hours), and available in various voltages such as 12V, 110V, 120V, and 220V. LED lights offer bright, clear illumination and come in multiple colors to represent different functions, such as warnings, power-on status, or fault conditions. They can be non-polarized, making installation simpler and reducing wiring errors.

Inspection Windows: FRP (Fiberglass Reinforced Plastic) distribution box inspection windows allow operators to visually check meters or internal components without opening the box. These windows are made of tempered glass and FRP, providing high transparency (>90% light transmittance) and structural strength. They often feature multi-layer protection, dual-sealed doors, and anti-tampering pins to ensure safety and prevent unauthorized access.

Functions and Benefits

Visual Monitoring: Quickly assess the status of meters, breakers, or alarms without opening the enclosure, reducing exposure to live components.

Safety: Minimizes risk of electric shock by allowing observation through a window or via indicator lights.

Maintenance Efficiency: Supports preventive maintenance by providing immediate visual cues for faults, overheating, or abnormal operation.

Durability: High-quality materials like FRP and tempered glass ensure impact resistance and long-term reliability, even in industrial environments.

Installation and Maintenance

Placement: Indicator lights should be installed on the panel front for clear visibility. Inspection windows should align with meters or critical components.

Testing: Regularly check indicator lights for proper operation and replace any faulty LEDs. Verify that inspection windows are clean and free of cracks...
