

Mpo3 fiber optic patch cord

Overview

MPO Patch Cord OM3 refers to a type of fiber optic cable with MPO (Multi-Fiber Push-On) connectors at both ends. It is designed for high-density environments and supports multimode transmission with a core size of 50/125 μ m. However, what is MTP®/MPO cable, and how to set apart the right MTP®/MPO type for various scenarios—whether MTP®/MPO jumper, trunk, harness, or breakout cables—can be complex. OM3 cables are optimized for 850nm wavelength and can handle speeds of up to 10Gbps. While high-fiber-count trunk cables form the massive backbone of modern data centers, the performance of the entire network ultimately hinges on the final few meters: the MPO / MTP® patch cord. Also known as equipment cords or jumpers, these specialized, multi-fiber assemblies bridge the gap. Designed to unleash high-speed data center capabilities, MPO Cable Assemblies and Adapters use high-density MTP and MPO-style connectors to deliver streamlined connectivity, high port density, superior loss performance and simplified maintenance for the high-bandwidth networks of tomorrow.
