

Selection Guide for SFP Optical Modules for Intelligent Computing Centers DML

Overview

This article focuses on four cores: market trends, scenario-based selection, compatibility tips, and Finisar adaptation, providing practical selection solutions for enterprises, carriers, and data centers. 800G has become the mainstream. The Basics: These acronyms define the form factor and speed of a pluggable optical transceiver. Choosing the wrong one leads to physical layer link failures. SFP/SFP+: The standard for 1G/10G campus and server connectivity. QSFP-DD: The 400G/800G requirement for high-density AI clusters and. SFP (Small Form-factor Pluggable) optical modules are compact, hot-pluggable transceivers that enable network equipment to connect seamlessly to fiber and copper links. These modules, including SFP, SFP+, and SFP28, are widely used in enterprise networks, data centers, and carrier-grade deployments. In the AI era, Huawei provides a full range of GE to 800GE optical modules, featuring three major capabilities: Spanning (ultra-long transmission), Stable (ultra-high reliability), and Secure (ultra-solid security). 25G is the new 10G; 100G (QSFP28) is the workhorse; design for migration plans to 400G/800G.
