

Solution Linear Drive Pluggable Optical SFP

Overview

LPO (Linear-drive Pluggable Optics) is a transceiver packaging technology. It utilizes specialized components, including ASIC substrates, ASIC. One of the most groundbreaking network innovations driving transformations of data centers in 2025 is Linear Pluggable Optics (LPO)—a Digital Signal Processor (DSP)-free optical solution designed to optimize power, cost, and latency. At Dell Technologies, we are excited to offer fully supported. having tripled in the past decade. According to the 2024 Report on U. S Data Center Energy Use, published by the Lawrence Berkeley National Laboratory, data centers account for 4. 4% of total electricity consumption in the U. By shortening the electro-optical conversion path and improving bandwidth density and energy efficiency, they are redefining the system. However, currently, traditional high-speed optical modules utilize Digital Signal Processors (DSPs) for processing of high-speed signals. Although DSPs offer functions such as digital clock recovery and dispersion compensation, enabling signal recovery with lower error rates, it also brings higher.
