

Spacing between installation distribution boxes

Overview

The distance between the distribution box and the switch box should not exceed 30 meters, and the horizontal distance between the switch box and the fixed electrical equipment it controls should not exceed 3 meters. It takes the incoming power and safely distributes it to different circuits throughout your building. Some of the requirements and ratings include: voltage, continuous current, wire range (load and line side). The construction quality of distribution boxes directly impacts the overall quality level of a project. As the construction unit responsible for electrical equipment installation, it is essential to carry out the finalization, procurement, and installation of distribution boxes in accordance with. Panelboards shall be installed in accordance with the listing of the panelboard. NEC Article 408. Use more than one SPD for stronger protection.
