

Use Scenarios for 800g Optical Modules

Overview

The application scenarios for 800G optical modules include SR (100m scenario), DR/FR/LR (500m/2km/10km scenarios), as well as ER/ZR (40km/80km scenarios). Figure 1 800GE Networking Structure The evolution of the 800Gbit/s technology solution includes three generations. Data Center Interconnect (DCI) typically refers to load balancing or disaster recovery backup connections between adjacent data centers, with connection distances that can span several tens of kilometers. Given the. How to Choose the Right 800G Optical Module for Your Network?

1. Singlemode or Multimode Fiber 4. High-Performance Computing (HPC) 4. 800G optical modules are optoelectronic devices composed of optical and electronic components and optical interfaces. These two types of 800G transceivers differ significantly in technical architecture. Developments in three distinct areas are needed for 800G deployment: optical modules and direct attach copper (DAC) cables, switch ASICs, and 800GE standardization. NVIDIA's 800G optical portfolio primarily utilizes two key form factors: QSFP-DD (Quad Small Form Factor Pluggable Double Density).
