

Wiring price for distribution box and surge protection box

AI Overview

The cost of wiring for a distribution box and surge protection box typically ranges from \$1,100 to \$6,000 or more, depending on amperage, installation complexity, and included protective devices.

Distribution Box Costs For a standard residential or small commercial setup, distribution box replacement or installation costs vary based on amperage, number of circuits, and location:

- 100–125A indoor panel: \$1,200–\$2,500 including parts and labor.
- 200A outdoor panel with meter socket: \$3,000–\$6,000, with premium setups reaching \$4,500–\$8,000 for complex routing and enhanced safety features.

Material and labor breakdown: Materials typically include the panel, breakers, and wiring; labor ranges from 4–16 hours depending on complexity, with hourly rates from \$75–\$150.

Additional factors: Outdoor or weather-resistant enclosures, code upgrades, and long wiring runs increase costs.

Surge Protection Box Costs Surge Protection Devices (SPDs) are often integrated into distribution boxes or installed separately:

- Type 1 SPD: Installed at the main service panel to protect against direct lightning strikes.
- Type 2 SPD: Installed in secondary distribution panels to protect against switching surges or distant lightning.
- Type 3 SPD: Installed near sensitive equipment or outlets for end-device protection.

The cost of SPDs varies by type and capacity, with residential surge protection devices typically ranging from \$50–\$300 per unit, while industrial-grade SPDs can cost several hundred dollars each.

Installation wiring costs depend on distance from the main panel and complexity, often included in the overall distribution box installation.

Combined Systems Some modern distribution boxes, especially for solar PV systems, come with built-in surge protection and circuit breakers:

Example: A PV combiner box for 8–10 kW solar inverters includes DC and AC breakers plus surge protection, priced around \$200–\$...
